STATEWIDE SURVEY OF CHILDCARE RATES IN RHODE ISLAND

Sponsored by

Rhode Island Department of Labor and Training

and

Rhode Island Department of Human Services

Conducted by

Matthew M. Bodah, Ph.D.
Charles T. Schmidt, Jr. Labor Research Center
University of Rhode Island
2009

Section I. Introduction

This study is sponsored by the Rhode Island Department of Labor and Training (DLT) on behalf of the Rhode Island Department of Human Services (DHS), pursuant to section 40-6.2-1.1 of the General Laws of State of Rhode Island, as amended. The survey was conducted between March 1 and June 30, 2009 by the Schmidt Labor Research Center (SLRC) of the University of Rhode Island (URI). The questionnaire used in the survey was prepared jointly by SLRC researchers and employees of DLT and DHS with input from childcare providers.

This study was undertaken to determine childcare rates charged throughout Rhode Island and, particularly, to establish the 75th percentile rate. The 75th percentile rate indicates the rate at or below which 75% of respondents charge. For example, the 75th percentile weekly rate for toddler care in Family or Group Family Childcare Homes is \$175.00, which means that 75% of respondents who provide such care charge \$175.00 per week or less; or put another way, only 25% charge more than \$175.00 per week.

The ultimate purpose of this study is to assist DHS in determining the appropriate maximum reimbursement rates for childcare services provided to families participating in the DHS Child Care Assistance Program (CCAP). The questionnaire, however, also included items to aid in the interpretation of the data and to allow us to learn more about the concerns of providers. For example, questions concerning the types of care provided, age groups cared for, number of children subsidized, and hours of operation were included. Also, providers were given the opportunity to include written comments. A copy of the English version of the questionnaire is appended to this report.

It should be noted that the data reported here indicate the cost to consumers—that is, the rates (or prices) that providers charge for childcare—not the cost of providing the care.

Section II. Methodology

The survey

This research was conducted with a mail survey using a questionnaire that was similar to the one used in previous survey years.

Questionnaires were sent to all Family or Group Family Childcare Homes (hereinafter, homes) and Childcare Centers (hereinafter, centers) certified or licensed by the Rhode Island Department of Children, Youth, and Families (DCYF). A "home" refers to a provider who is certified to care for up to 12 children in a family home setting. A "center" is a facility licensed to care for children in a group setting. The largest center in our study is licensed to care for 488 children.

A postcard in English and Spanish was sent several weeks before the survey informing providers that they would be receiving a questionnaire and urging them to participate in the study. A cover letter in English and Spanish was included in the survey packet along

with both English and Spanish questionnaires and instructions for returning, in a self-addressed stamped envelope, whichever questionnaire the respondent chose to fill out. A contact phone number was included for individuals with questions.

Since our initial response rate from homes was lower than expected, we conducted a follow-up survey with this group.

Terms used

The letter "N" used in tables in this report indicates the number of responses to a particular item. The term "mean" refers to the mathematical average. "Standard deviation" is a measure of dispersion about the mean. The "median" is the middle occurring value—that is, the 50th percentile. The "range" is the distance between the lowest and highest value.

Response rate and response bias

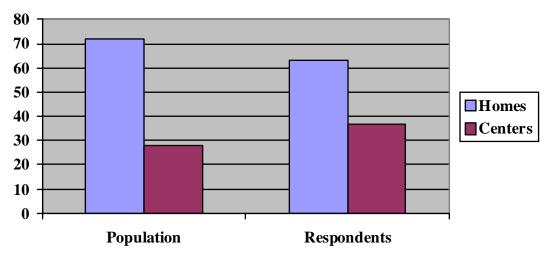

Two separate mailing lists were provided by DCYF. The list of homes contained 1,073 providers, while the list of centers contained 423 providers. Hence, a total of 1,496 questionnaires were sent. By June 30, 2009, 627 usable questionnaires were returned: 394 from homes and 233 from centers. The overall response rate, therefore, is 41.91% with 36.72% of homes and 55.08% of centers responding.

Compared to the 2006 survey, the number of responses decreased by 102 or 14.00%. The overall response rate, however, increased from 40.24% in 2006 to 41.91% in 2009, since there were 316 fewer providers in the population than there were in 2006 (1,496 versus 1,812). The number of Spanish responses increased from 179 to 196 or 9.50% from 2006 to 2009.

Since questionnaires were sent to *all* homes and centers certified by DCYF, there is no concern with sampling error. But since a 100% response rate was not achieved, there remains the possibility of response bias—that is, the possibility that non-respondents *would have* replied differently than respondents. Although our ability to estimate response bias is limited, we can compare the respondent pool with the total population on at least two variables.

First, as Chart 1 shows, the overall response rate is higher for centers than for homes. (Although on an item-by-item basis, the response rate varies.) However, all data are presented in three ways: all respondents, homes only, and centers only. By separating the responses, the separate contributions of homes and centers to aggregate totals can be examined.

Chart 1. Homes and centers as percentages of the population and respondents.

.

Tables 1a, 1b, and 1c compare the geographic dispersion of respondents with the childcare provider population. For all respondents and for homes and centers considered separately, most communities are represented in the pool of respondents in relatively close relation to their presence in the population.

Concern over geographical bias should be linked to hypotheses concerning the effects of geography. Would urban providers respond differently from suburban or rural providers, for example? Would providers in Northern RI respond differently from those in Southern RI?

The response rates indicate some difference between cities and towns. Of the 8 cities in RI, 5 are under-represented (although some barely) among respondents, while only 7 of 31 towns are under-represented.

By county, we see that Providence County has the most under-represented communities with 9. Two of Washington County's 9 communities are under-represented. Except for the City of Warwick, all of the cities and towns of Bristol, Kent and Newport counties are over-represented. Again, while these variances are noted, none are so severe as to compromise the integrity of the study. For the most part, communities are represented in the respondent pool in relation to their presence in the population.

Section III. Characteristics of respondents

Corporate status and affiliation

Nearly all homes are for-profit, independent (i.e. not part of a chain or multi-site organization) and not affiliated with a church or school (Table 2). In contrast, approximately 55% of centers are non-profit, just over 34% are part of a chain or multi-site organization, and approximately 18% are affiliated with a church or school.

Types of programs offered

Homes are more likely than centers to provide programs for very young children (Table 3). Nearly all homes provide programs for infants (birth to 18 months), toddlers (18 to 36 months), and preschoolers (3 to 5 years). Centers, however, are more likely than homes to provide nursery school and kindergarten programs, even though only about 15-30% provide either type of

program. Homes and centers provide programs for school-age children (6 to 12 years) in relatively close proportion, approximately 70% to 55%, respectively.

Age groups

Table 4 also shows that homes provide care for very young children at a higher rate than centers. While Table 3 indicated that very few homes have

Table 4. Age groups							
	A	All	Ho	omes	Centers		
	N	%	N	%	N	%	
Infants	404	64.43	314	87.71	90	39.65

School-age children	387	61.72	256	71.51	129	56.83	

kindergarten programs, Table 4 shows that roughly three-quarters of homes provide care for kindergarten-age children.

Providers' schedules and hours

According to Table 5, centers offer half-day care at a slightly higher rate than homes. All other schedules of care, however, are more likely to be found in homes. Perhaps the most notable differences are for weekend and evening care, which are offered by approximately one-quarter to one-third of homes, but by very few centers.

Tables 6a, 6b, and 6c display the days and hours of operation for homes and centers. The figures presented are the most frequently reported begin/end times and the range of reported times. In a few cases, two times were reported with the same frequency and are displayed in the table as 3:00 pm/7:00 pm, for example. During the week, most homes

report a starting time of 6:00 am and closing time of 5:00 pm. For centers, both start and end times are, typically, an hour later: 7:00 am and 6:00 pm, respectively.

N	507	289	217				

Number of children

Centers, of course, generally care for more children than do homes. Among respondents, the average number of children permitted by their license is 6.89 for homes and 77.96 for centers.

Table 9a. Number of children permitted by certificate or license, frequency distribution.								
	All		Homes		Co	enters		
1-5	19	3.37	18	5.13	0	0.00		
6-12	341	60.57	333	94.87	8	3.79		
13-49	58	10.30	2	0.00	58	27.49		
50+	145	25.75	0	0.00	145	68.72		

The frequency distribution shows that nearly all homes are certified for between 6 and 12 children, while most centers may accommodate more than 50 children.

Table 9b. Number of children permitted by certificate or license, descriptive statistics.							
All Homes Centers							
Mean	33.52	6.89	77.96				
Standard deviation	49.94	1.15	59.16				
Median	8.00	6	65				
Range	3-488	3-12	6-488				

are willing to care.

While Tables 9a and 9b concern the number of children homes and centers are certified or licensed for, the following tables (10a and 10b) display statistics concerning the number of children for which providers

Table 10a. Number of children for which providers are willing to care, frequency distribution.									
	All		Ho	mes	Centers				
	N	%	N	%	N	%			
1-5	32	5.85	30	8.80	1	0.49			
6-12	316	57.77	307	90.03	8	3.92			
13-49	60	10.97	4	1.17	56	27.45			
50-	139	25.41	0	0.00	139	68.14			

We see that the average number of children homes are willing to care for is about 7, while the centers are willing to accept about 82, on average.

Table 10b. Number of children for which providers are willing to care, descriptive statistics.							
	All Homes Centers						
Mean	35.13	7.42	81.75				
Standard deviation	54.21	2.24	66.44				
Median	8	8	61				
Range	0-488	0-20	3-488				

Since homes, by definition, are certified to care for up to 12 children, it is not surprising that nearly all indicate caring for 12 children or fewer (Tables 11a and 11b).

Table 11a. Number of children for which providers are currently caring, frequency distribution.

shift. They may have one group of children in the morning and another in the afternoon, totaling more than 12 different children.

Chart 2 provides a visual display of the differences between the number of children providers are certified or licensed to care for, the number they are willing to care for, and the number for which they currently care. The figures presented on top of the columns are rounded averages.

Chart 2. Average number of children allowed by certificate or license, willing to accept, and currently in care.

There appears to be some underutilization of current capacity. On average, homes are willing to accept 1 more child than they currently care for and centers 24 more children.

Section IV. Rates and subsidies

Ways of charging

Approximately 80% of both homes and centers indicate that they charge on a weekly basis. This holds true overall and for school age children only.

Table 12a. Most common way of charging.								
	1	All	Homes		Centers			
	N	%	N	%	N	%

Months for increases

Table 13 below shows that September is the month when rate increases usually occur, though this is particularly true for centers. The bottom half of the table indicates the months during the past year when rates were raised.

Number of hours in a week

The weekly rates are displayed above. Table 15 shows the median number of hours covered by the weekly rates. Overall, the median number of hours used in calculating the weekly rates is usually somewhat higher for centers than for homes.

Table 15. Median number of hours covered by weekly rate.								
	All	Homes	Centers					
School age, before school only	10	10	10					
School age, after school only	15	15	17.5

Infant care	40	40	42.5					
Toddler care	40	40	43.25					
Preschool care	40	40	41.75					
Kindergarten care	40	40	40					

Comparisons with the previous survey

Table 16, as well as Charts 3a, 3b, and 3c, show comparisons between the current survey data and figures from the 2006 survey. The increase in the average of the 75th percentile rate across all programs is 4.00%. For school age care, the increase in the average of the 75th percentile rate is 4.84% and for infant and toddler care it is 6.87%. For preschool and kindergarten programs, there was a decrease of 0.58%. For homes, the school age average of the 75th percentile increased 3.64%, while the infant and toddler and preschool and kindergarten averages remained the same. For centers, the school age average of the 75th percentile increased by 7.94%; the infant and toddler average by 22.09%; and the preschool and kindergarten average by 20.00%

Table 16. Comparison of 75 th percentile weekly rates, 2006 and 2009.

All program average	147.44	153.33	142.77	145.22	154.66	178.11				
Note: Averages indicate th	e average	of the 75 th	percentile	rates.	-	_				

The following charts provide a visual comparison of 75th percentile rates in the 2006 and 2009 surveys.

Chart 3a. Comparison of average 75th percentile rates, 2006-2009, all providers.

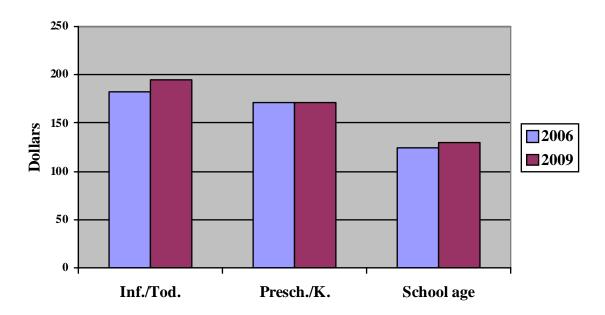

Chart 3b. Comparison of average 75th percentile rates, 2006-2009, homes.

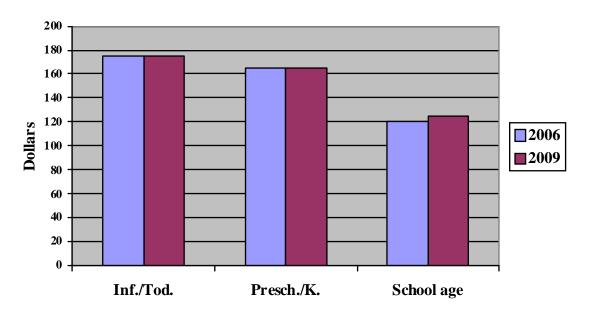

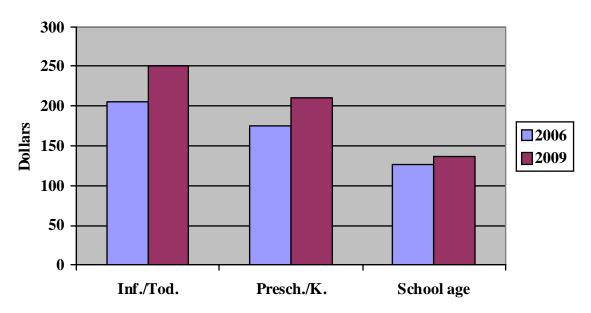

Chart 3c. Comparison of average 75th percentile rates, 2006-2009, centers only.

Weighted averages

One problem with simply averaging increases across programs is that doing so gives all programs equal weight. Our data tell us, however, that certain programs (e.g. toddler care) appear with greater frequency than other programs (e.g. school-age programs). Therefore, increases in toddler care rates would have a stronger *total* effect on the market than increases in school age programs. Hence, if we weight the 75th percentile rates by program frequency, a somewhat different picture emerges as to the magnitude of rate increases. We see in Table 17 that overall percentage change in 75th percentile rate is 7.14% rather than 4.00%. For home the change in the weighted average is 3.85% and for centers 12.60%.

Table 17. Average 75 th percentile rates, weighted by program frequency, 2006 and 2009.								
	2006	2009	Percentage change					
All	\$148.13	\$158.70	7.14%					
Homes	146.11	151.74	3.85					
Centers	149.38	168.20	12.60					

Subsidies

We asked providers a series of questions about the subsidies that children in their care receive. Table 18 shows that the rate of acceptance of DHS subsidized children is very high in both homes and centers, 90% and above. In addition, approximately 76% of

homes and 84% of centers accept children during the period that their subsidized status is pending.

The table also shows that centers are more likely than homes to receive other sorts of government or private subsidies. About one-fifth of centers receive some other form of government subsidy, and approximately one-third receive some sort of private subsidy. Such subsidies are virtually nonexistent for home providers.

Table 18. Information concerning subsidies.									
		A	.ll	Ho	mes	Centers			
		Yes	No	Yes	No	Yes	No		
Accepts DHS subsidized children.	N	518	47	309	35	209	11		
	%	91.68	8.32	89.83	10.17	95.00	5.00		
Accepts children during the	N	403	106	233	73	170	33		
pending period.	%	79.17	20.83	76.14	23.86	83.74	16.26		
Receives private subsidies.	N	73	504	6	347	67	155		
	%	12.65	87.35	1.70	98.30	30.18	69.82		
Receives government subsidies.	N	50	524	4	349	46	173		
	%	8.71	91.29	1.13	98.87	21.00	79.00		

According to Table 18, most homes and centers accept children during the "pending period". Table 19 shows that about two-thirds of homes and 60% of centers are likely to charge full rates during the pending period. Table 19 also displays the amount charged if a child goes to pending status during re-certification.

Median	4	3	10						
Range	0-176	0-10	0-176						

The percentage of providers by the number of subsidized children is displayed in Table 20a. Approximately 20% of homes have no subsidized children, but otherwise the number of homes caring for

between 1 and 8 subsidized children is fairly evenly dispersed. Approximately half of the centers have between 11 and 100 subsidized children. The table of descriptive statistics shows that the average and median number of subsidized children for homes is approximately 3. The average for centers is 18, but with a median of 10, indicating that the average is skewed by larger facilities.

Table 21. Providers by percentage of children subsidized by DHS.									
	1	All	H	omes	Centers				
Percentage of children	N	%	N	%	N	%			
0	68	14.62	55	19.50	13	7.10			
+0-25%	165	35.48	55	19.50	110	60.11			
+25-50%	107	23.01	67	23.76	40	21.86			
+50-75%	57	12.26	43	15.25	14	7.65			
+75-100%	68	14.62	62	21.99	6	3.38			

Table 21 shows the number of providers by the percentage of children in their care subsidized by DHS. The table reveals

that homes are fairly evenly dispersed across categories, while, for centers, nearly all have between zero and 50% of children subsidized.

With Tables 22a, 22b and 22c we can examine whether rates affect subsidies. Overall, there does not appear to be a uniform trend suggesting any impact of subsidies on rates. For the most part, rates rise and fall randomly.

Kindergarten care	205.00	182.50	190.00	150.00					

Other fees charged

We asked providers to indicate other fees that they charge. Most homes and nearly all centers charge for the late pick up of children. Late payment charges are also levied by approximately one-third of homes and over half of centers. Centers frequently charge registration/application fees, though few homes charge these fees. Centers are also much more likely than homes to charge for field trips.

Table 23. Other fees charged.

Written comments

The questionnaire includes a section where respondents could provide written comments. Many respondents did make additional comments on a variety of topics. These were

recorded and sur an addendum to	mmarized and are avenue this report.	ailable from the I	Department of Hu	man Services as	

The information you provide is needed by the RI Department of Human Services (DHS) to determine the usual rate charged for child care in Rhode Island. Although your participation is voluntary, collecting this information is required by state law.

Individual responses will be kept completely confidential and will not be identified with a particular center or program. Only summary statistics will be reported. No respondents will be identified by name to any state or federal agency.

Please fill out a separate questionnaire for each site you operate. This is important in order to obtain accurate information on response rates and childcare capacity. You may photocopy all answers that are the same across all sites. However, please be sure to provide all code numbers for all sites.

Section 1. *ALL PROVIDERS* SHOULD RESPOND TO THE FOLLOWING ITEMS.

 For which type of facility are you responding a Family or Group Family Child Care Department of Children, Youth & Families family home setting) Child Care Center (i.e. you are licent group setting) 	Home (i.e. you are certified by the RI (DCYF) to care for up to 12 children in a
 2) Is your program classified as for-profit or not a For-profit b Not-for-profit (i.e. a 501(c)(3) corpo 	-
 3) Does your facility operate as an independent multi-site organization or chain? a Independent, stand alone program b Part of a multi-site organization or content.
