Ryan White HIV/AIDS Program

AIDS Drug Assistance Program (ADAP)

Annual Client-Level Data Report 2017

The Ryan White HIV/AIDS Program AIDS Drug Assistance Program (ADAP) Annual Client-Level Data Report is published by the Division of Policy and Data, HIV/AIDS Bureau (HAB), Health Resources and Services Administration (HRSA), U.S. Department of Health and Human Services, Rockville, Maryland.

Data are presented for clients reported to the HRSA HAB *AIDS Drug Assistance Program Data Report* (ADR) data system for calendar years 2014 through 2017.

The AIDS Drug Assistance Program (ADAP) Annual Client-Level Data Report is not copyrighted and may be used and copied without permission. Citation of the source is, however, appreciated.

COMMENTARY

The Ryan White HIV/AIDS Program (RWHAP), first enacted by U.S. Congress in 1990, provides a comprehensive system of direct HIV healthcare, essential support services, and medications for more than half a million people with HIV in the United States. The RWHAP has five statutorily defined Parts that provide funding for medical and support services, technical assistance, clinical training, and the development of innovative models of care to meet the needs of different communities and populations affected by HIV. The RWHAP provides grant funding to all 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and six U.S. Pacific jurisdictions to support HIV care and treatment services. The RWHAP legislation authorizes a portion of Part B funds to be designated for the AIDS Drug Assistance Program (ADAP), which provides U.S. Food and Drug Administration (FDA)-approved medications to low-income people with HIV who have limited or no health care coverage.

ADAP funds may be used to provide HIV and HIV-related prescription drugs and/or to purchase health care coverage for eligible clients and for services that enhance access to, adherence to, and monitoring of drug treatments. The ADAP is critical to ensuring that people with HIV are able to adhere to medication regimens and remain virally suppressed. People with HIV who achieve and maintain an undetectable viral load have effectively no risk of sexually transmitting the virus to an HIV-negative partner. The medication and health care coverage assistance offered by ADAP is crucial for attaining optimal HIV health outcomes among people with HIV, for preventing further transmission of the virus and, ultimately, for ending the HIV epidemic.

HISTORY OF HRSA'S RWHAP AIDS DRUG ASSISTANCE PROGRAM

The RWHAP is administered by the U.S. Department of Health and Human Services (HHS), Health Resources and Services Administration (HRSA), HIV/AIDS Bureau (HAB). The RWHAP legislation was first enacted in 1990 when Congress passed the Ryan White Comprehensive AIDS Resources Emergency (CARE) Act to address the crisis of the HIV epidemic in the United States. This legislation has been amended and reauthorized four times: in 1996, 2000, 2006, and most recently in 2009, as the Ryan White HIV/AIDS Treatment Extension Act of 2009.

In 1987, the FDA approved the drug azidothymidine (AZT, zidovudine, Retrovir) to treat HIV in the United States [1]. At that time, the cost of this drug was about \$10,000 per year, per person—preventing access for most people with HIV [2]. In 1991, HRSA launched the AZT Drug Reimbursement Program with \$30 million approved by Congress under a public health emergency provision allowing low-income people with HIV access to HIV treatment [2]. HRSA's AZT Drug Reimbursement Program laid the foundation for ADAP, authorized under the CARE Act in 1996 as a separate line item under Title II (Part B) and classified as a core medical service.

Each state/territory operates an ADAP, and each is unique because of the state's HIV prevalence, health care system, and administrative structures used to ensure HIV medications are available to eligible RWHAP clients [2]. The purpose of ADAP, as stated in the RWHAP legislation, is "to provide therapeutics to treat HIV or prevent the serious deterioration of health arising from HIV in eligible individuals, including measures for the prevention and treatment of opportunistic infections" [3]. To be eligible to receive assistance from a state/territory under ADAP, the client must have a medical diagnosis of HIV and have a low income, as determined by the state/territory.

Since Congress first appropriated funds for ADAP in 1996, ADAPs have expanded considerably, as has the availability of antiretroviral medication. Between 1996 and its reauthorization in 2000, ADAP program funding increased from \$52 million to \$528 million. In addition, for the first time in 2000, ADAPs were permitted to pay health care coverage costs to support coverage of HIV-related medications [2,4].

1

In 2006, funding rose another 50%, in a continued effort to reach underserved populations. During the 2009 reauthorization of ADAP, funding levels reached \$835 million for fiscal year 2010 [1–4].

In recent years, ADAP funding has leveled. Full-year appropriations for the RWHAP in fiscal year 2017 were \$2.3 billion, with \$900.3 million (39%) allocated for ADAP. The significant increases in ADAP funding since the program was first appropriated underscore the important role of ADAP services for people with HIV, as evidenced by the following:

- · increased and improved HIV testing, resulting in more people knowing their HIV status
- increased number of people on ART after the U.S. Public Health Services' guidelines indicating the need for early treatment of people with HIV
- more people living longer with HIV
- · more intensive use of HIV drugs for long-term survivors
- increased cost-sharing associated with health insurance
- · increased cost of medications and health care coverage; and
- prevention of new infections through treatment of HIV.

As is true for the entire RWHAP, ADAPs serve as the payor of last resort. ADAP grant recipients and subrecipients are expected to enroll clients into health care coverage for which the client may be eligible (i.e., Medicare, Medicaid, or other public and private plans). ADAPs coordinate with other payors and programs to provide clients with access to HIV medications [2,4].

INAUGURAL ADAP CLIENT-LEVEL DATA REPORT

This report is the first publication of national ADAP client-level data submitted through the ADAP Data Report (ADR) data system. The ADR was implemented in 2013 and includes annual, client-level data collected by the ADAP in each state/territory. ADR data describe the demographic characteristics of clients accessing ADAP services and the ADAP-funded services used. HRSA can use these data to evaluate the reach and impact of ADAP on a national level.

The ADR data do not include information about clients receiving non-ADAP RWHAP services, such as core medical and support services. However, many ADAP clients also receive these services. Together, ADAP services and RWHAP direct care and support services create a comprehensive system of care and treatment for people with HIV. Data for clients receiving non-ADAP RWHAP services are reported to HRSA through the RWHAP Services Report (RSR) and are published annually in the RWHAP Annual Client-Level Data Report [5].

This document includes data reported to HRSA for all clients receiving ADAP services during calendar years 2014 through 2017. The data presented include client demographics, socioeconomic factors (e.g., income as a percentage of the federal poverty level [FPL], health care coverage), and service utilization. Although ADR data reporting began in 2013, this report includes data beginning in 2014 to ensure the data quality.

HIGHLIGHTS OF THE ANALYSES

The data presented in this report should be interpreted with caution. Each ADAP operates within the broader context of the state's health care system and public health infrastructure.

RWHAP AIDS Drug Assistance Program Clients

Each year, ADAPs serve approximately 260,000 or more people with HIV. The number of people receiving ADAP services has been largely consistent from 2014 through 2017. In 2017, 268,174

clients received ADAP services (Table 1). Although the national number of ADAP clients has remained consistent, variability occurred by state (Table 8); these shifts may be attributed to a variety of reasons, including changes to data collection, the state's health care landscape, eligibility requirements, and other factors during these years.

The majority of ADAP clients are male. In 2017, 77.7% of clients were male, 21.1% were female, and 1.2% were transgender (Table 1). The gender distribution of ADAP clients has remained largely consistent since 2014. See Technical Notes for information about gender designation.

Nearly three-quarters of ADAP clients are from racial/ethnic minority populations. In 2017, 39.5% of clients self-identified as Black/African American, 26.4% as Hispanic/Latino, and less than 2% each as Asian, American Indian/Alaska Native, Native Hawaiian/Pacific Islander, and persons of multiple races. Less than one-third (30.9%) of ADAP clients self-identified as White. These race/ethnicity distributions have remained consistent since 2014 (Table 1).

ADAP clients from racial/ethnic minority populations are younger than White clients. In 2017, 56.9% of White ADAP clients were aged 50 years or older, compared with 44.2% Native Hawaiians/ Pacific Islanders, 41.6% American Indians/Alaska Natives, 38.2% Blacks/African Americans, 35.3% of clients of multiple races, 34.9% of Hispanics/Latinos, and 29.8% of Asians (Table 2).

More than half of female ADAP clients are Black/African American. In 2017, among the female clients whose race/ethnicity was reported, 56.5% were Black/African American, 23.1% were Hispanic/Latina, 17.7% were White, and less than 2% each were Asian, American Indian/Alaska Native, Native Hawaiian/Pacific Islander, or multiple races (Table 3). In comparison, 34.8% of male clients were Black/African American, 34.7% were White, and 27.2% were Hispanic/Latino.

Socioeconomic Factors Among ADAP Clients

More than one-third of all ADAP clients have no health care coverage. In 2017, 38.6% of ADAP clients had no health care coverage, a decrease from 44.4% in 2014. (Table 1). This percentage varied by race, with 51.2% of Hispanics/Latinos and 43.6% of Blacks/African Americans with no coverage compared with 22.2% of White clients (Table 2). This percentage also varied by gender. The percentages with no health care coverage was 38.4% among males and 39.0% among females. The lack of coverage was 50.6% among transgender women and 31.7% among transgender men. (Table 3).

Higher percentages of ADAP clients from racial/ethnic minority populations are living at or below 100% FPL compared with White ADAP clients. In 2017, among race/ethnicity groups, Hispanics/Latinos had the highest percentage of clients at or below 100% FPL (51.8%), followed by American Indians/Alaska Natives (49.5%), Blacks/African Americans (48.3%), clients of multiple races (45.8%), Native Hawaiians/Pacific Islanders (40.5%), Asians (35.7%), and Whites (33.7%) (Table 2).

Higher percentages of female and transgender ADAP clients are living at or below 100% FPL compared with male clients. In 2017, among female clients, 52.7% were living at or below 100% FPL, compared with 42.0% of male clients. Among transgender women, transgender men, and clients of other transgender identities, 63.7%, 44.3%, and 58.0%, respectively, were living at or below 100% FPL. (Table 3).

Service Utilization

The number of clients receiving only full-pay medication support has decreased, whereas an increased number of clients are receiving other services or a combination of services. Among ADAP clients with service utilization information in 2017, 48.4% received full-pay medication support only, a decrease from 64.1% in 2014. Concurrently, 20.4% of ADAP clients in 2017 received medication co-pay/deductible assistance from ADAPs compared with 12.3% in 2014. The percentage of clients

receiving multiple services also increased from 17.1% in 2014 to 26.1% in 2017 (Table 1). These changes may be attributed to changes in the health care landscape during this timeframe.

The use of full-pay medication services is higher among clients younger than age 50 years, and the number of medication co-pay/deductible services is higher among clients aged 50 years and older. In 2017, 69.9% of clients accessing full-pay medication services were younger than age 50. In comparison, among clients accessing medication co-pay/deductible services, 65.7% were aged 50 years and older. Clients receiving health care coverage premium assistance or receiving multiple services were distributed evenly between clients older and younger than 50 years of age (Table 7).

For each service type, distribution differs by HHS Region. In 2017, among clients receiving medication co-pay/deductible, the highest percentage were in Region 9 (27.7%; Arizona, California, Guam, Hawaii, and Nevada). Among ADAP clients receiving full-pay medication only, the highest percentage was in Region 4 (37.3%; Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee). Region 4 also had the highest percentage (22.8%) of ADAP clients receiving multiple services compared with other regions. Among clients receiving insurance premium assistance, the highest percentage (23.3%) was in Region 2 (New Jersey, New York, Puerto Rico, and U.S. Virgin Islands) (Table 7).

TECHNICAL NOTES

The AIDS Drug Assistance Program (ADAP) Data Report (ADR) is the U.S. Department of Health and Human Services (HHS), Health Resources and Services Administration (HRSA), HIV/AIDS Bureau's (HAB) primary source of annual, client-level data to evaluate the impact of the ADAP program on a national level. The ADR allows HAB to characterize the individuals using the program, describe the ADAP-funded services being used, and delineate costs associated with these services [6].

The ADR was developed and implemented in 2013. To allow sufficient time for data quality assessment, ADR data included in this report begin with 2014. All Part B ADAP recipients are required to submit data to the ADR as a condition of the RWHAP Part B grant award. The ADR consists of two components: (1) the Recipient Report and (2) the Client Report. The Recipient Report is a collection of information about ADAP administration, funding, and policies. The Client Report (or client-level data) is a collection of records that includes each ADAP client's encrypted unique identifier ("eUCI"), basic demographic data, enrollment and certification information, and client-level data for clients enrolled during the calendar year reporting period (January 1 to December 31) [6].

ADR data do not include information on non-ADAP RWHAP services, such as outpatient ambulatory health services, case management, or other services provided by RWHAP. Although the ADR may include RWHAP clients who received additional services, the ADR does not collect information to identify which clients overlap with other RWHAP services. Client-level data from these services are reported through another data system [5] and are published annually in the *RWHAP Annual Client-Level Data Report*.

PRESENTATION OF DATA

The data in this report include information received by HRSA HAB for clients served by ADAP during calendar years 2014–2017. The purpose of the client demographics is to describe the sociodemographic characteristics of all clients **enrolled** in the ADAP, **regardless of whether they received services** (i.e., a client can be enrolled in ADAP but not use the service) [6].

- Tables 1–7: National-level data—Numbers and percentages of clients served by ADAP (non-RSR), presented by year, selected demographic stratifications, HHS region, and services received.
- Tables 8–13: State-level data—Numbers and percentages of clients served by the ADAP (non-RSR) by state, presented by selected demographic stratifications

Tables 1–8 display subtotals for each subpopulation and the overall totals. The subtotals are displayed to reflect the denominator used for the percentage calculation of each subpopulation. Because of missing data, the values in each column may not sum to the column total.

ADAP Clients

To be eligible for enrollment in ADAP services, an ADAP client must have a diagnosis of HIV and a low income as defined by the state of residence. An ADAP client is any person who is certified as eligible to receive ADAP services, regardless of whether the person used ADAP services during the reporting period. During the reporting period, an ADAP client may have received medication assistance and/ or health insurance assistance, been disenrolled, and/or been deemed eligible but did not receive any services. In the event of a funding shortage, clients may be placed on a waiting list (there are currently no ADAP waiting lists) [6].

Age Group

ADAP recipients are required to report the client's year of birth. This information is used to calculate the client's age during the designated year as a discrete variable. For tables displaying age groups (Tables 1–7), client ages were categorized to align with the Centers for Disease Control and Prevention's (CDC) National HIV Surveillance System (NHSS) age group delineations. The age group delineations are as follow: <13, 13–14, 15–19, 20–24, 25–29, 30–34, 35–39, 40–44, 45–49, 50–54, 55–59, 60–64, and ≥65 years. In Table 9, client ages were categorized using broader age group delineations: <13, 13–24, 25–34, 35–44, 45–54, 55–64, and ≥65 years.

Race/Ethnicity

Recipients report race/ethnicity information for ADAP clients according to the Office of Management and Budget (OMB) reporting standards. The OMB standards have five categories for race: American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, and White. Data on ethnicity have two categories: (1) Hispanic or Latino, and (2) not Hispanic or Latino. Race and ethnicity are submitted as separate variables and combined for analysis. The race/ethnicity variable is categorized as American Indian or Alaska Native, Asian, Black or African American, Hispanic or Latino, Native Hawaiian or other Pacific Islander, White, and "multiple races" (two or more categories of race reported).

In this report, clients categorized by race were not Hispanic or Latino; however, the number of clients reported in each race category may include clients whose ethnicity was not reported. ADAP recipients are expected to make every effort to obtain and report race and ethnicity, based on each client's self-report. Self-identification is the preferred means of obtaining this information.

Gender

Gender-related data are based on client self-report. Gender designations in this report are male, female, or transgender. Transgender is an umbrella term used to identify people whose sex assigned at birth does not match their current gender identity or expression. Transgender clients are subsequently reported as transgender male to female (MTF), transgender female to male (FTM), or transgender unknown; the transgender unknown category may include transgender people who do not identify with these transgender variable options.

Federal Poverty Level

Poverty level characterizes the client's annual household income as a percentage of the FPL at the end of the reporting period. The poverty levels were categorized as 0–100% FPL, 101–138% FPL, 139–250% FPL, 251–400% FPL, and >400% FPL.

Health Care Coverage

ADAP recipients are required to report all sources of health care coverage that each client had for any part of the reporting period, regardless of whether the ADAP paid for it. Health care coverage was categorized as private employer, private individual, Medicare, Medicaid, Medicare and Medicaid (dual eligibility), Veterans Administration, Indian Health Service, other plan, multiple coverages, and no coverage. The Medicaid classification also includes the Children's Health Insurance Program (CHIP) and other public state health care coverage programs. The Medicare Part D classification is a stand-alone prescription drug coverage insurance and includes co-insurance, co-payment, or donut hole coverage.

ADAP Services

ADAP services include both medication assistance services and health care coverage premium and cost-sharing assistance services, which are provided to eligible clients enrolled in ADAP. All ADAP funds, regardless of their source (e.g., state funds, RWHAP Part B ADAP Base, RWHAP Part B Base,

RWHAP Part B Supplemental Funding, ADAP Emergency Relief Funds, RWHAP Part A contributions, 340B rebates, ADAP Crisis Task Force Rebates), are reported in the ADR [6].

Medication assistance (i.e., full-pay medication support) is the use of ADAP funds to purchase FDA-approved medications for the treatment of HIV and the prevention and treatment of other opportunistic infections commonly associated with HIV/AIDS. In addition, other types of medications can be purchased by ADAP recipients using ADAP funding if those medications support a client's retention in care (e.g., medication to treat hepatitis C).

Health care coverage assistance is the use of ADAP funds to pay for one or more of the following:

- Full premium payment
- Partial premium payment
- Medication co-pay/deductible (including Medicare Part D coinsurance, co-payment, or donut hole coverage)

A full premium payment is when the ADAP pays 100% of the client's health insurance premium. A partial payment is when the ADAP pays a portion of the health insurance premium (i.e., <100%). A medication co-pay/deductible (including Medicare Part D-related costs) is when the ADAP pays the co-pay/deductible for the client's HIV-related medication. Medication co-pays, deductibles, and coinsurance are considered health care coverage assistance services, not medication services [6].

Region

The U.S. Department of Health and Human Services (HHS) uses 10 geographic designations for classifying regions of the United States that encompass all states and territories. The classification of states and territories within these regions is as follows:

- Region 1: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont
- Region 2: New Jersey, New York, Puerto Rico, U.S. Virgin Islands
- Region 3: Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia
- Region 4: Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee
- Region 5: Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin
- Region 6: Arkansas, Louisiana, New Mexico, Oklahoma, Texas
- Region 7: Iowa, Kansas, Missouri, Nebraska
- Region 8: Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming
- · Region 9: Arizona, California, Guam, Hawaii, Nevada
- Region 10: Alaska, Idaho, Oregon, Washington

The six U.S. Pacific jurisdictions are included in HHS Region 9; however, only Guam submits client-level data. The other jurisdictions, therefore, are not included in this report. Puerto Rico and the U.S. Virgin Islands are included in Region 2.

State

State data are displayed in Tables 8–13. State-level analyses include data submitted for all RWHAP ADAP services. Clients receiving services in multiple states are not included in state-specific totals; these clients make up less than 2% of the total RWHAP population. In addition, data presented by state include data for all clients served by State ADAPs and are not separated by the type of ADAP-specific funding (i.e., RWHAP Part B, RWHAP Part B Supplemental, and ADAP Emergency Relief Funds).

Abbreviations: FTM, female-to-male; MTF, male-to-female.

Note: Percentages shown are based on the row total.

^a Includes Medicare Part D co-insurance, co-payment, or donut hole coverage.

b Hispanics/Latinos can be of any race.
c Subtotals for each subpopulation are displayed to reflect the denominator used for the percentage calculation of each subpopulation; due to missing data, the values in each column may not sum to the column total. Due to rounding, percentages may not add to 100.0%.
